CREATING TOMORROW'S SOLUTIONS

VINNEVA®

ARE YOU SUFFERING FROM “BITUMENITIS”?

LET YOUR BITUMEN
SHOW ITS MUSCLE!

OUR EXPERTS HAVE NOW FOUND THE CURE: VINNEVA® – A RANGE OF DISPERSIONS FOR THE MODIFICATION OF BITUMEN EMULSIONS

Adding VINNEVA® to bitumen emulsions can yield one or more of the following benefits:

- Decreased drying times
- Reduced residual tack
- Increased adhesion and wear resistance
- Higher resistance to hydraulic pressure
- Fewer antioxidants required

Side effects that will almost certainly occur:

- Higher cost efficiency: the bitumen content in your formulation can be reduced by introducing fillers
- No ammonia or acrylic thickeners required
- Higher planning security: the price of the monomers contained in VINNEVA® is not as volatile as that of styrene monomers

VINNEVA® has been developed, tested and approved by experts who will help you find your optimal solution.

In our application labs, our experts will analyze your bitumen raw material and test which VINNEVA® product brings out the best in your bitumen for your specific application.

**CALL YOUR
EXPERT NOW!**

Today, many producers of bitumen emulsion applications suffer from the same problems:

Allergic reaction due to complaints about high residual tack

Creeping business anxiety due to existing target for reduction of chlorine content

Bad smell due to use of ammonia with acrylic thickeners

Stress due to complaints about long drying times

Sudden increased heart rate due to price fluctuation of styrene monomers

Rising cost pressure due to price increase of bitumen

These symptoms may cause clients to choose other waterproofing systems.
